RESEARCH INTERESTS

My research interests fall at the intersection of the fields of political psychology and democracy, with particular focus on the role of citizens in democratic (in)stability. This includes understanding why some citizens tolerate democratic backsliding, explaining mass support for undemocratic politics, as well as making sense of political misinformation and false beliefs. I seek answers to these puzzles primarily through quantitative research methods, with an emphasis on experimental approaches and cross-national comparative analyses. Theoretically, I draw from perspectives in political behaviour and social psychology.
